

Lead the Project Team

Lead the Project

Leadership styles are tailored to suit specific projects and team dynamics.

Direct

A hierarchical approach where the project manager makes all decisions.

Consultative

With consent from the team, the project manager makes the final decision.

Servant

A leader serves as a role model by exemplifying desired behaviors.

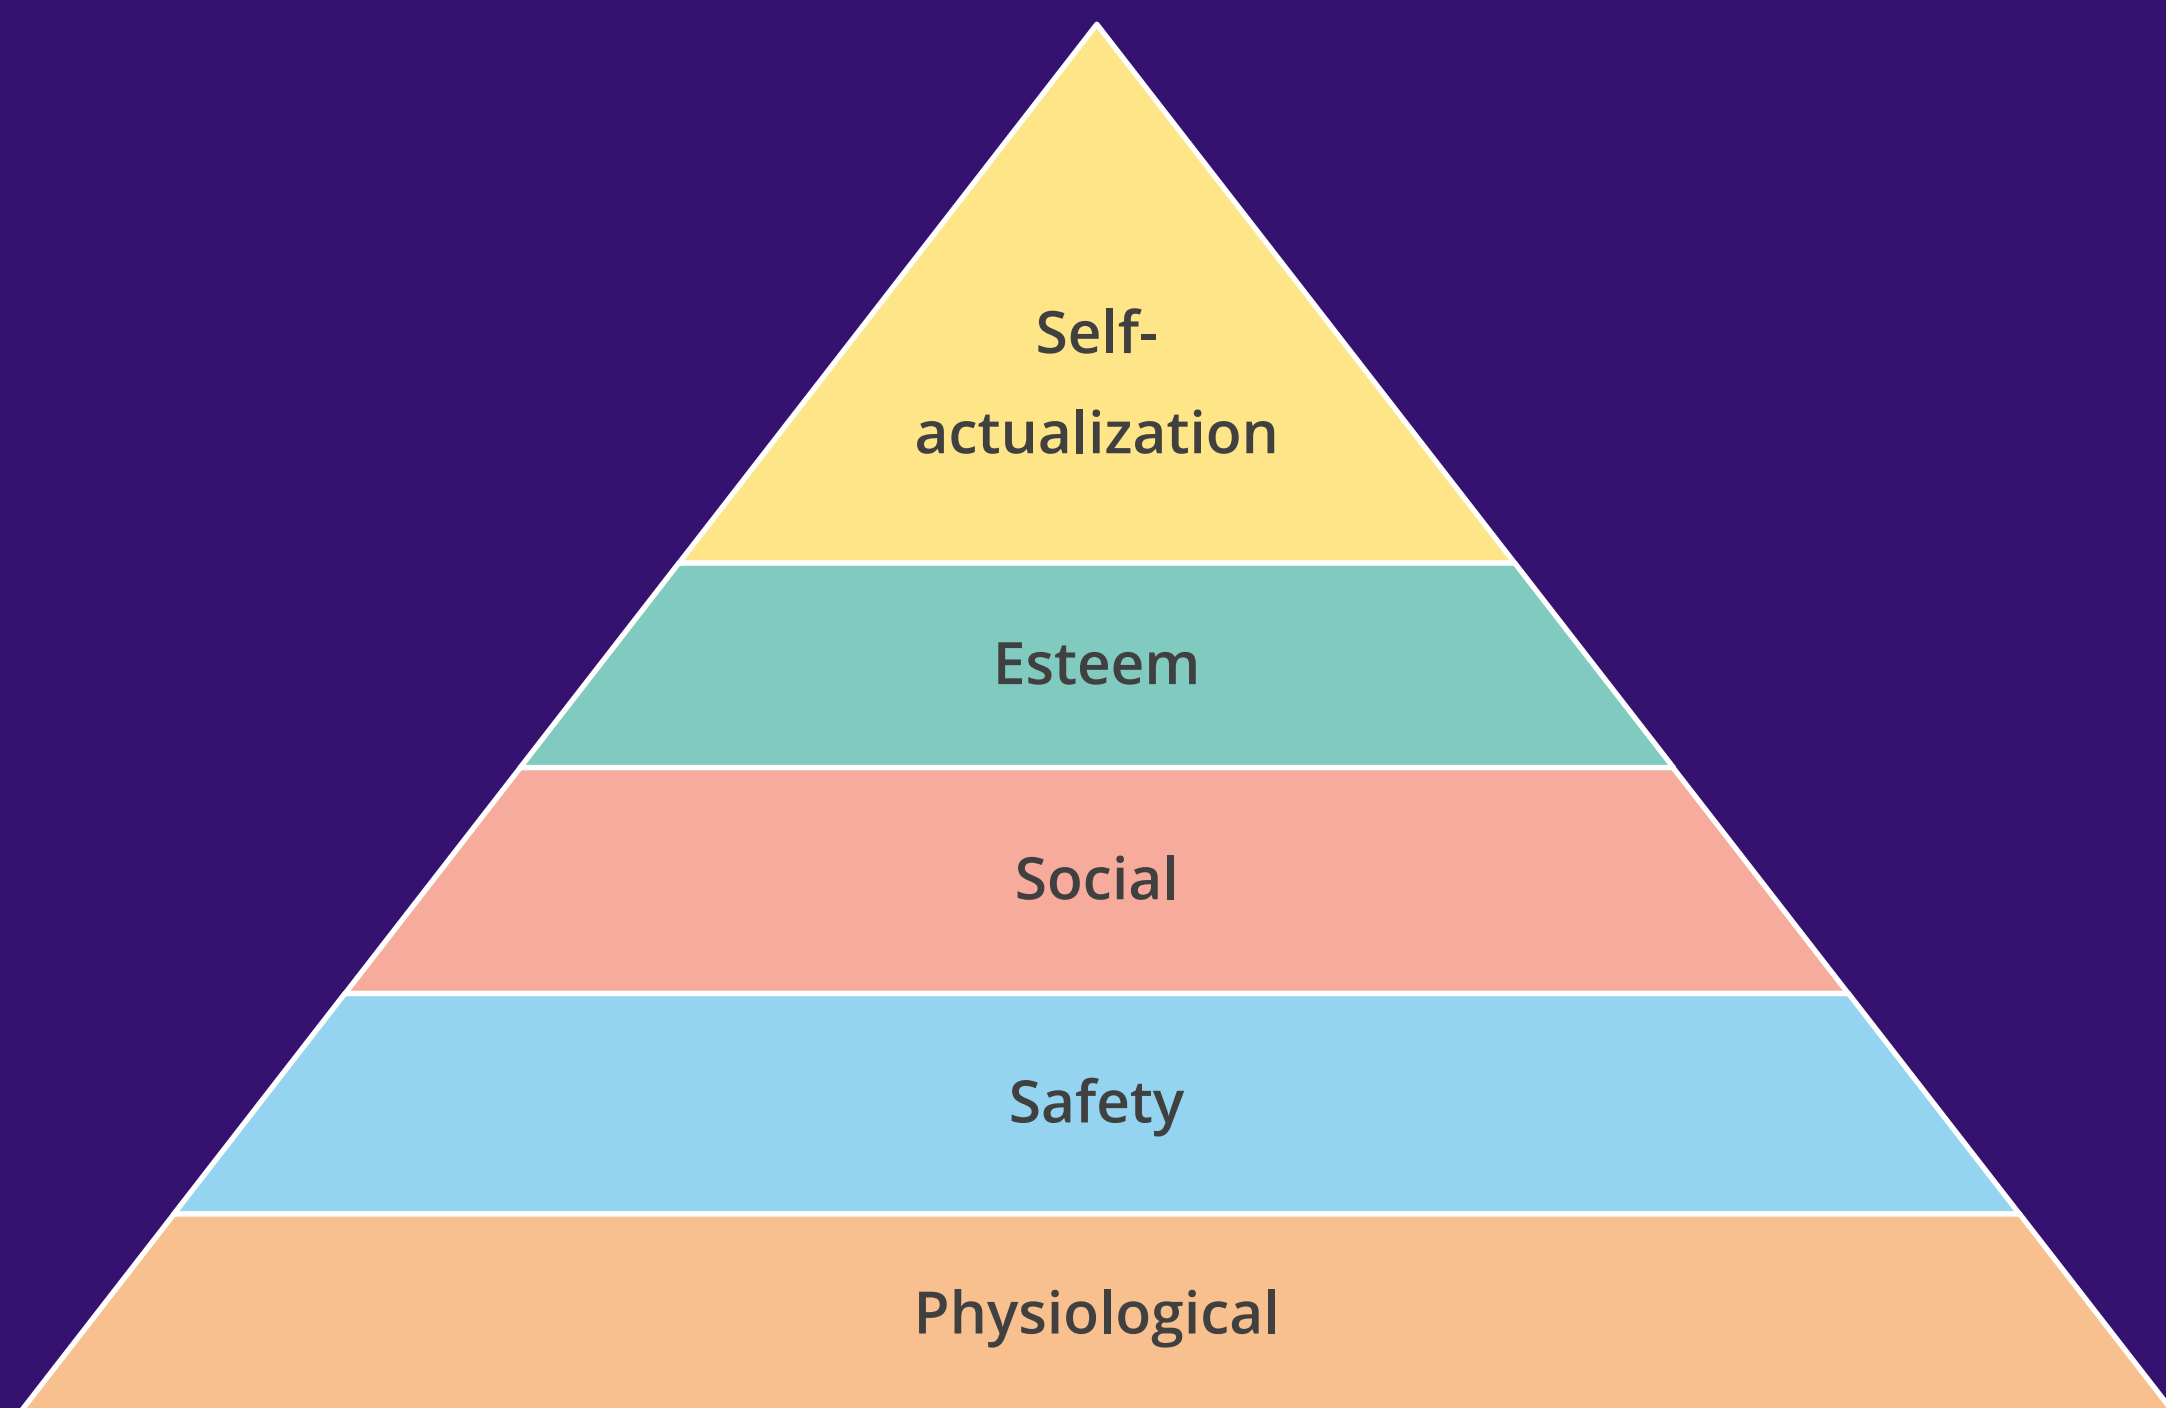

Consensus

Team and project managers make decisions collectively.

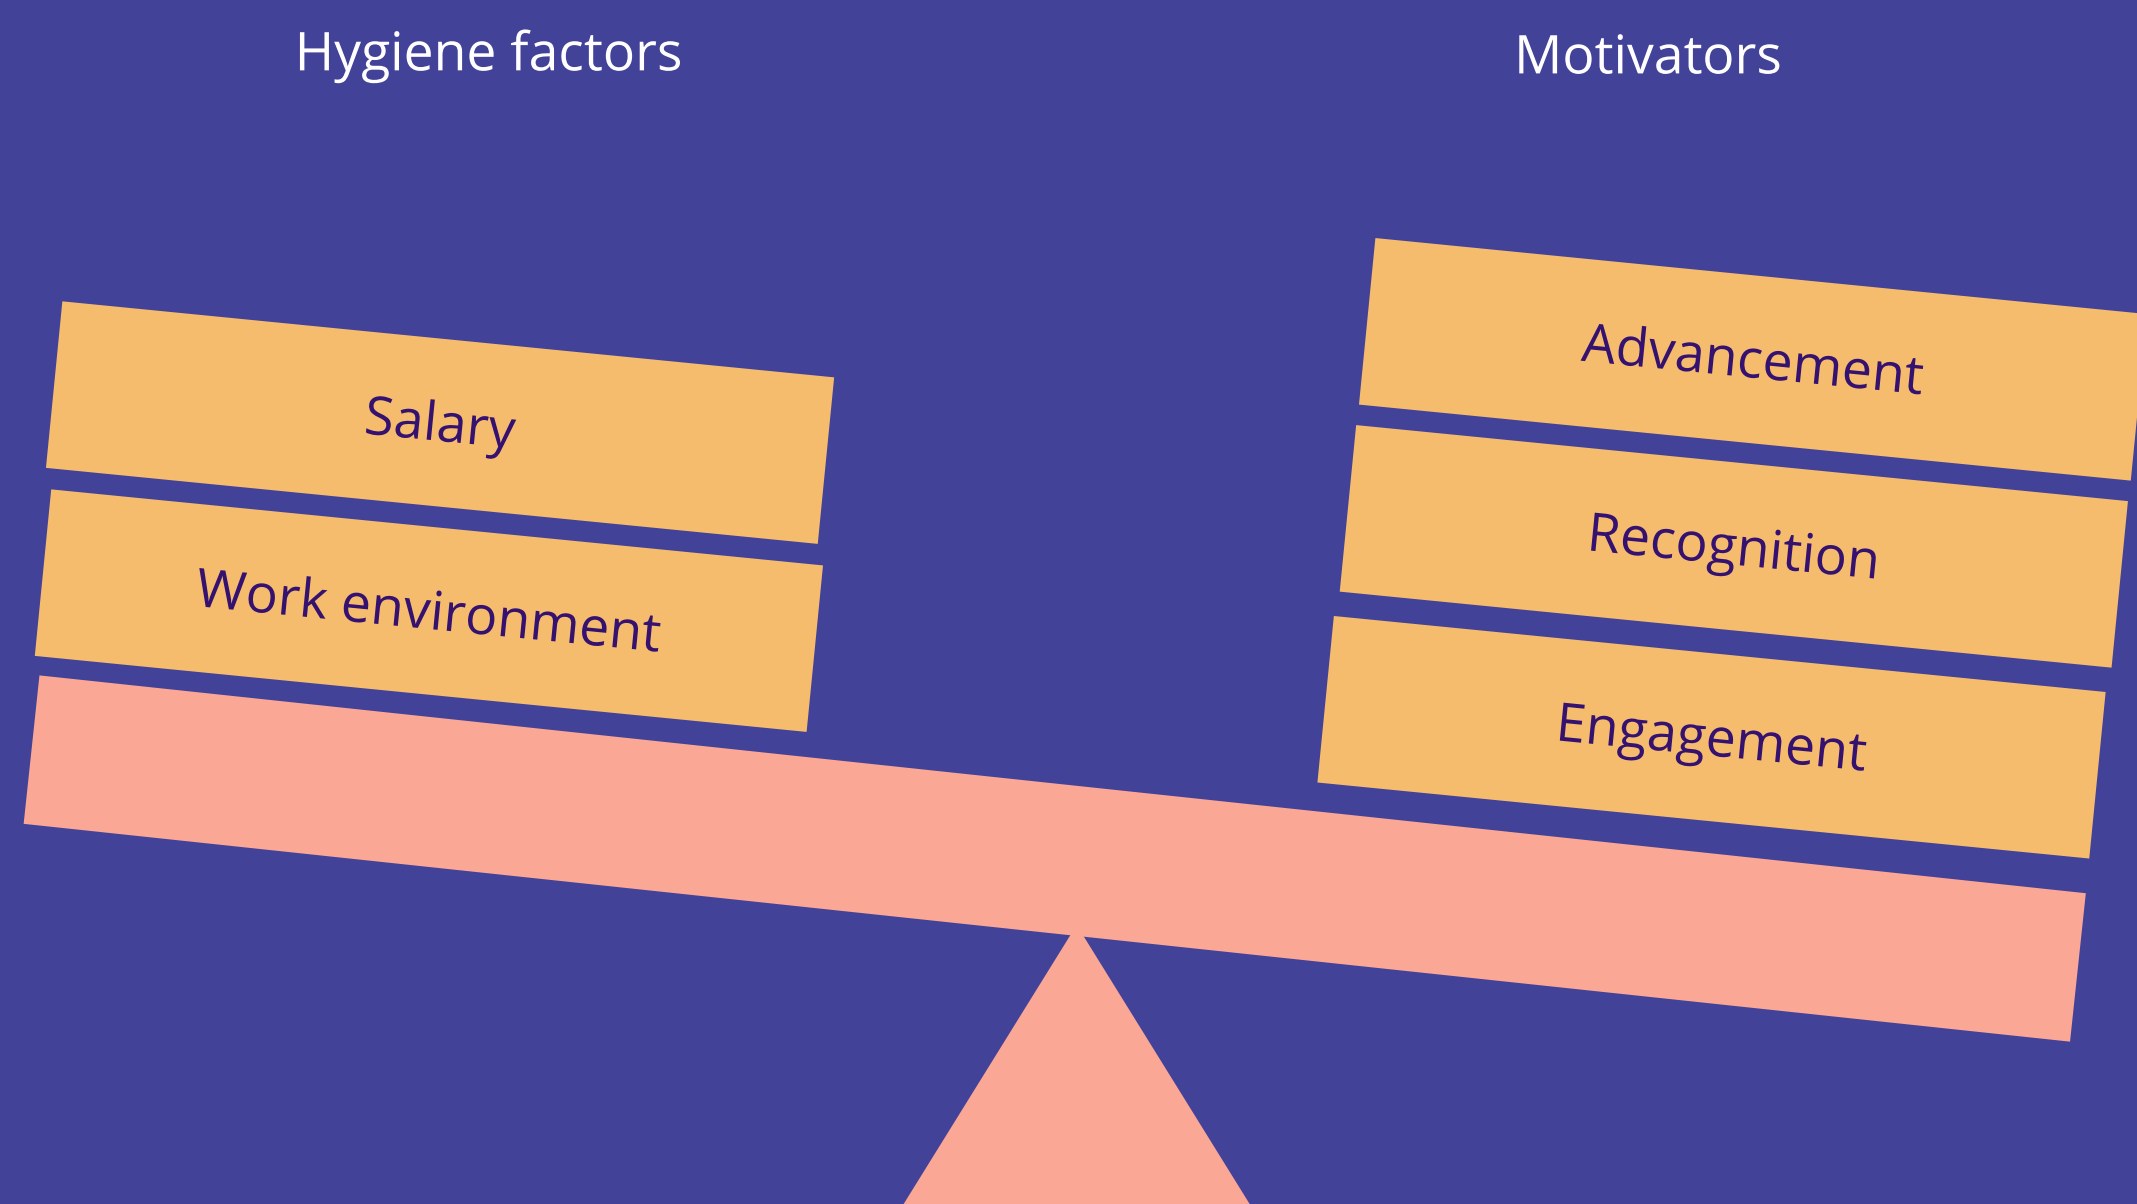

Situational

Leadership style adapts and changes to fit the team.

Maslow's Hierarchy of Needs

Herzberg's Motivation-Hygiene Theory (Two-Factor Theory)

McGregor's Theory of X and Y states that there are two categories of managers.

Theory X (Authoritarian)

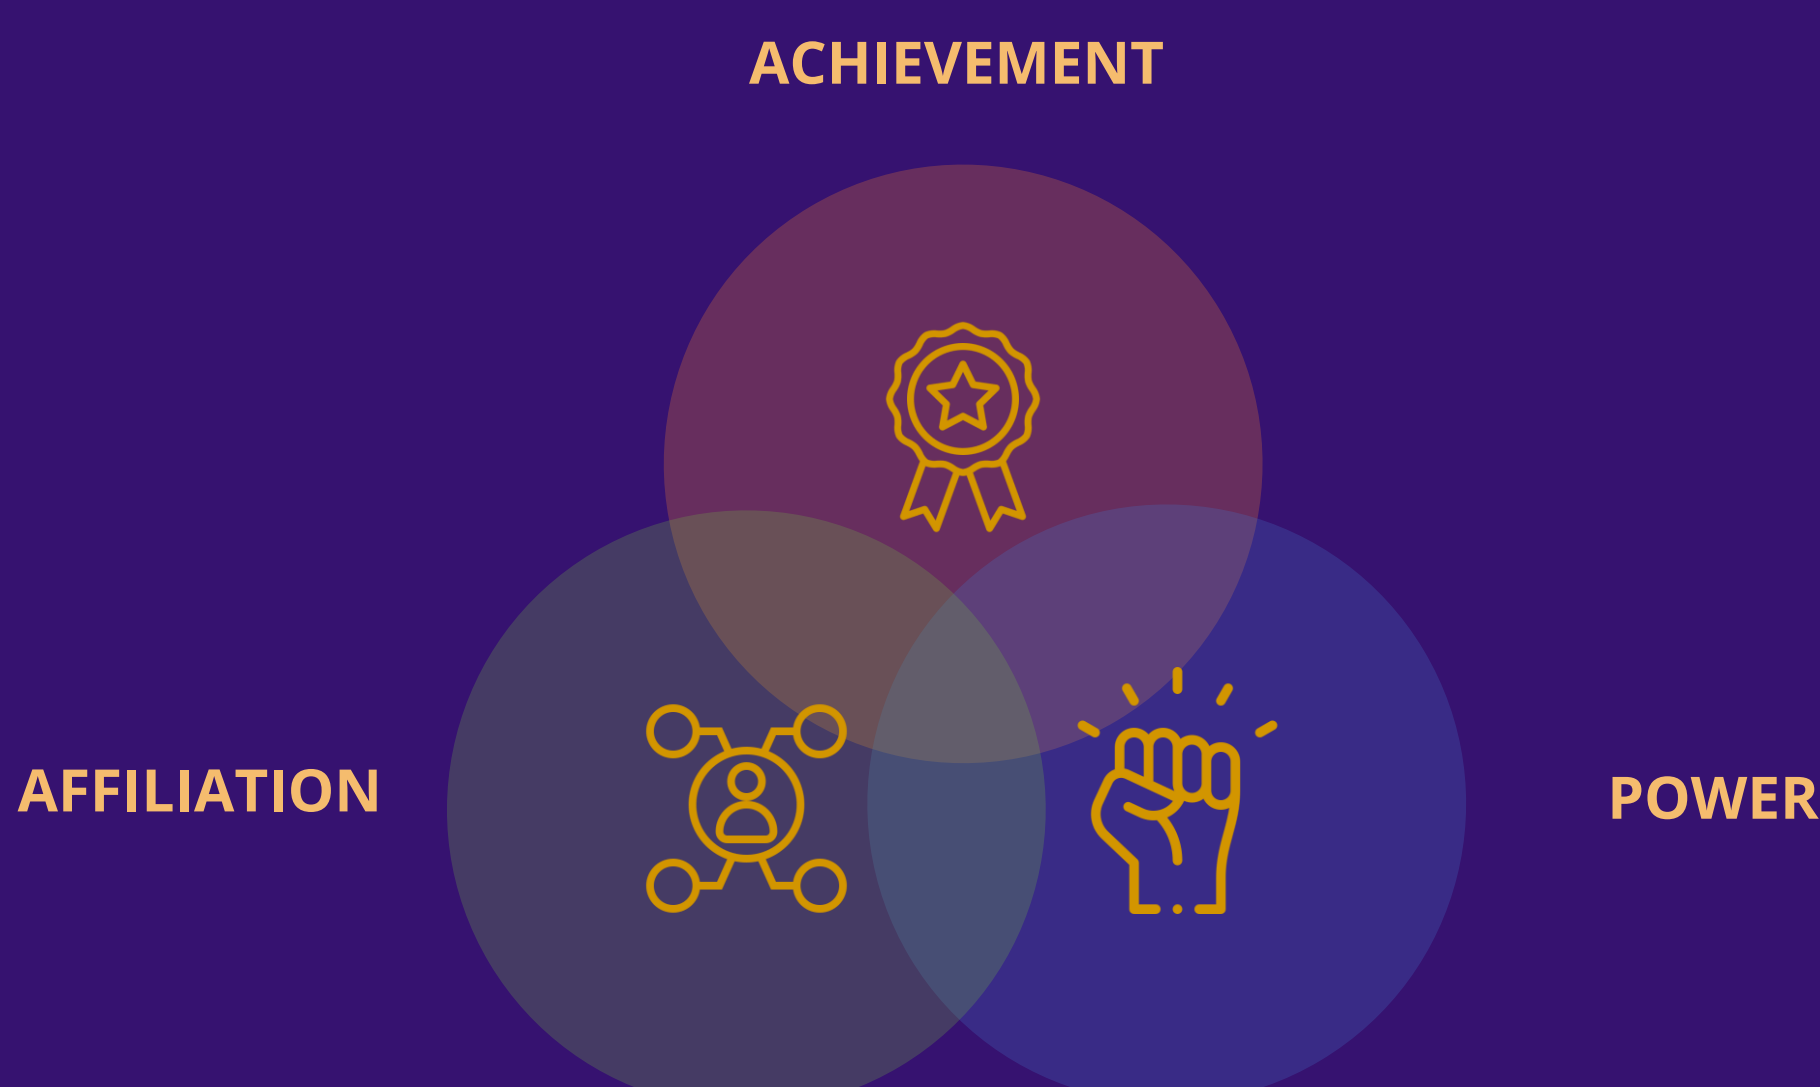

- Team members dislike and avoid work.
- Team members avoid increased responsibility.
- Team members need direction.

Theory Y (Participative)

- Team members want to be active.
- Team seeks job satisfaction.
- Team members do not need direction.

McClelland's Achievement Motivation Theory

An individual's needs are influenced by life experiences in three key areas and one area becoming dominant.

This information can be used to:

Influence goal-setting, feedback, and motivation and reward systems

Design roles around team members’ strengths

Identify the need for balance between T-shaped individuals and high-performing teams

Decision-Making Techniques

Project managers and project teams utilize various decision-making techniques in project management.

Unanimity

- Everyone agrees on a single course of action
- Useful in project team with great cohesion
- Example: Delphi technique

Majority

- Decision reached with over 50% of group support
- Groups of an uneven number of participants is created to avoid tie of votes.

Plurality

- Decision reached by the largest block in a group, even if a true majority is not achieved
- Used when more than two options are nominated

Voting methods to reach consensus

Fist of five

Planning poker

Roman voting (thumbs)

Polling

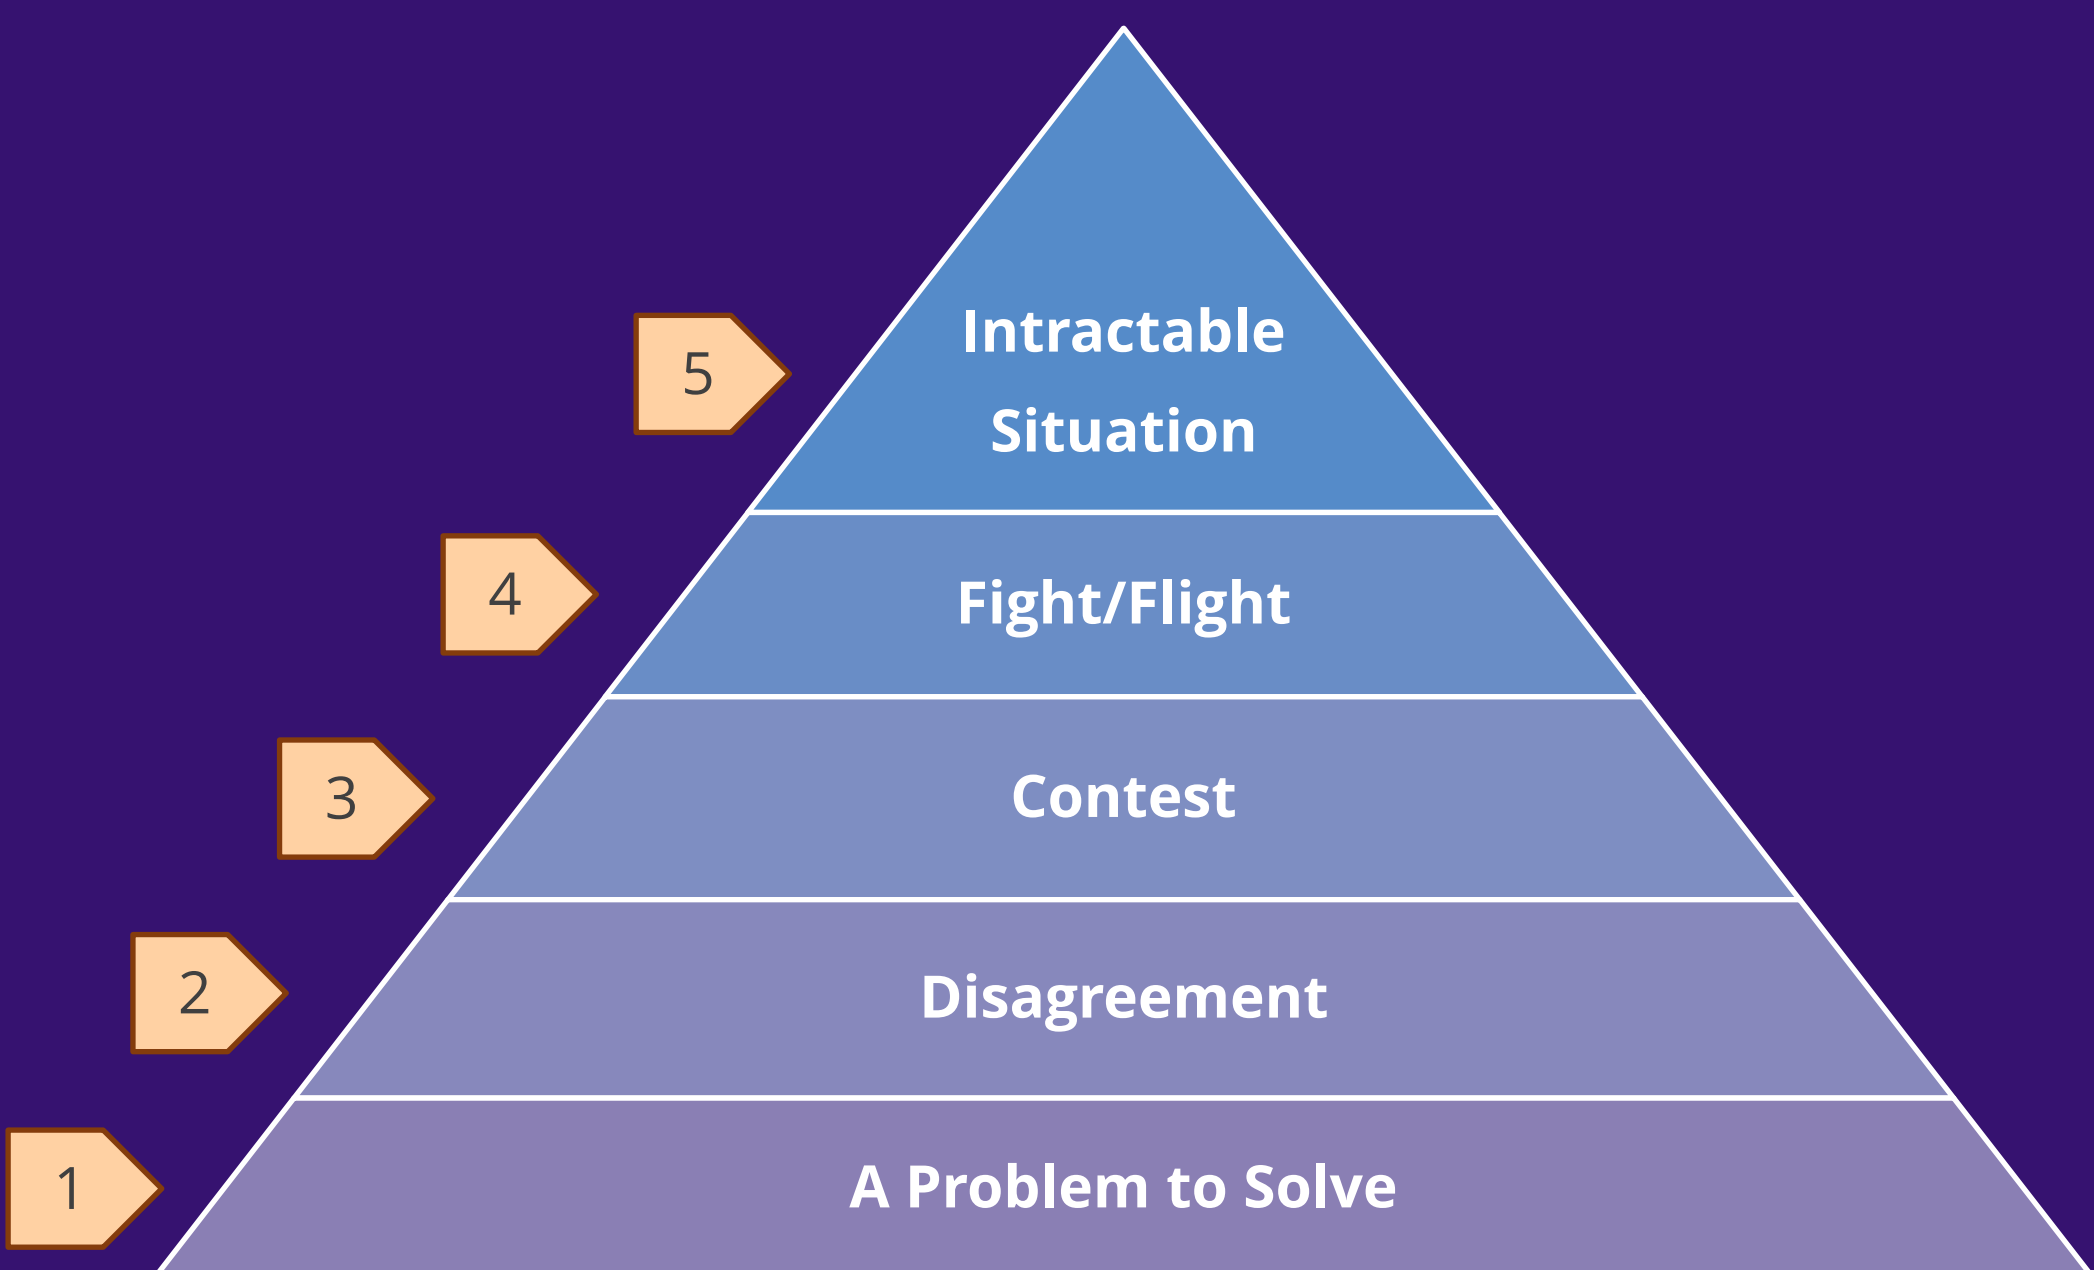

Dot voting

The five main components of emotional intelligence are:

1. Self-awareness
2. Self-regulation
3. Motivation
4. Social skills
5. Empathy

Leas’ Levels of Conflicts

Conflict escalates from level 1 to 5, shifting from task-oriented issues that can potentially be resolved to personal or relationship issues where the original problem is often overlooked.

Conflict Management Approaches

Smooth or accommodate	• Emphasize areas of agreement • Concede position to maintain harmony and relationships
Withdraw or avoid	• Retreat from the situation • Postpone the issue
Compromise or reconcile	• Incorporate multiple viewpoints • Enable cooperative attitudes or open dialog to reach consensus and commitment
Force or direct	• Pursue your viewpoint at the expense of others • Offer only win or lose solutions
Collaborate or problem solve	• Incorporate several viewpoints and insights from varying perspectives • Encourage a cooperative attitude and open dialog • Search for solutions that typically lead to consensus and commitment
